

Shortcut	Name	Description
F9	Continue (Step-by-Step)	Executes the code line by line. Automatically steps into functions, executes them, and returns.
F10	Step Over	Skips over function internals; executes them as a single step unless breakpoints exist inside.
F8	Resume Execution	Skips to the next breakpoint, useful for jumping over blocks of code quickly.
F11	Step Into	When stepping with F10, use this to enter a function and debug its internal lines.
Shift + F11	Step Out	Exits the current function and returns to the calling line in the outer scope.
