## **Mutable Array Methods in JavaScript**

Method	Description
push()	Adds elements to the end of the array.
pop()	Removes the last element from the array.
shift()	Removes the first element from the array.
unshift()	Adds elements to the beginning of the array.
splice()	Adds/removes elements at a specific index.
sort()	Sorts the array in place (default: lexicographical).
reverse()	Reverses the array in place.
copyWithin()	Copies part of the array to another location in the same array.
fill()	Fills all or part of the array with a static value.
delete	Removes an element but leaves an empty slot (not recommended).
length	Can be manually set to truncate or expand the array.
